

# A new, broader look at the Shine factor

## Bleach and Dark Shade in the new, improved Quadrant Anterior Shine A shade range

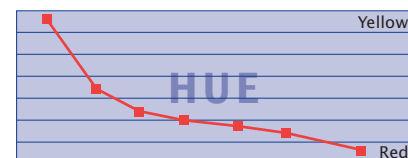

The Shine factor merits constant attention in aesthetic dentistry. Cavex has perfected the Quadrant Anterior Shine A shade range, as graphic representations of advanced laboratory measurements show.

The hue, chroma (saturation, intensity), lightness (the grey value of the colour) and transparency (light absorbency, 3D effect) components reinforce each other, assisting you in making the perfect match with the natural elements.

Anterior Shine is also introducing new shades: Bleach for the restoration of bleached elements and Dark Shade for a natural effect in older patients.

### Introductory offer: free Bleach and Dark Shade

Buy the Quadrant Anterior Shine starter kit with the new A shades in the special offer pack and receive Bleach and Dark Shade free of charge. Bleach and Dark Shade are also available as refills.
