

Cavex Bite&White Tooth Whitening Pen

WITH REVOLUTIONARY PVP*- TECHNOLOGY

NEW

The Cavex Bite&White Tooth Whitening Pen is a “brush-on” on-the-go whitening tool which can be used anywhere at any time. Whether you like to do complete whitening of upper and lower jaw or only touch-up those difficult, hard to reach spots, the Cavex Bite&White Tooth Whitening Pen can do it all. Simply take off the cap, turn the pen button until a small droplet of whitening gel appears and apply directly to the teeth. How easy is that?

*Innovative whitening technology – PVP

For any tooth whitening pen, maximum peroxide stability is required in both content and viscosity. The use of the revolutionary new PVP (polyvinylpyrrolidone) offers this stability. Where other whitening pens must be stored under cool circumstances, the Cavex Bite&White Tooth Whitening Pen can be **stored at room temperature** and the reaction will only start when there is contact with the teeth. The released peroxide is comparable to 6% hydrogen peroxide.

- Can be stored at room temperature!
- No expensive trays necessary
- Innovative gel sticks to the elements
- Easiest way to whiten teeth, great results
