

ASSESSMENT

Cavex Cream Alginate

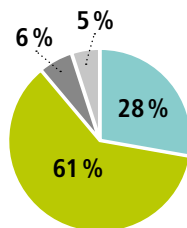

EXTREMELY ACCURATE DETAILS

The youngest member of the Cavex Alginate family is the Cavex Cream Alginate. This modern alginate can easily be mixed to form a perfect smooth and creamy mass.

Thanks to the incomparable detail accuracy of 5 µm in combination with the “standard” Cavex Alginate properties such as high tear resistance, fast setting and a lifetime of five years, Cavex Cream Alginate is starting to become serious competition for the quality achieved by silicone products. Of course, this modern alginate can also be scanned.

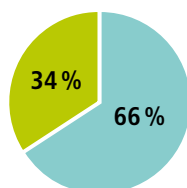

How would you assess Cavex Cream Alginate?

- 28% excellent
- 61% good
- 6% average
- 5% no comment

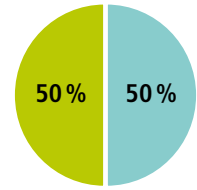

How would you assess the mixing properties in comparison to your current alginate?

- 34% better
