PREMIUM ORAL CARE

CAVEX EXSENSE BRUSHPEN

Sensitive teeth? Give your patient immediate relief – to take home directly from your practice.

Tooth sensitivity is often caused by dental erosion or exposed dentin. Cavex ExSense is a high quality desensitizer with 2% hydroxyapatite, an ingredient that helps fill small irregularities in the enamel and soothe sensitive areas using hydrodispensing sol. The formula also contains 0.1% potassium nitrate, which helps to relieve tooth sensitivity.

Application

The desensitizer helps reduce the sensation of tooth sensitivity and offers long lasting care for both sudden stimuli and persistent discomfort.

Features

- Hydroxyapatite helps care for the tooth surface and smooth small irregularities
- Supports the maintenance of a comfortable feeling for sensitive teeth
- Contributes to the remineralization process
- Compact, hygienic and ideal for use at any time of the day
- Pleasant mint flavor

The ExSense Brushpen is supplied in a practical display box containing twelve individually packaged pens. Ideal to provide directly after treatment or to sell to the patient.

The display box can also be placed perfectly on the counter or in the treatment room.

The pleasantly flavoured gel is contained in an easy to use brushpen that allows the patient to apply the gel very precisely to sensitive areas. Thanks to its compact size, the brushpen is easy to take along, allowing the patient to use it anytime and anywhere.
